**Spray Smart**

**BEST PRACTICES FOR PYRETHROID APPLICATIONS**

1. **Structure Base**
   - STAY 2 feet up and 3 feet out as directions permit

2. **Spot Spray**
   - NO LARGER than 2 square feet

3. **Drains**
   - Do NOT allow the pyrethroids to enter drains

4. **Cracks & Crevices**
   - Spray MUST stay in cracks & crevices

5. **Pin Stream**
   - On vertical & horizontal surfaces that do not have cracks, a pin stream application of 1" OR LESS is permitted

6. **Horizontal Surfaces**
   - Broadcast spray must stay at least 2 feet AWAY from concrete AND hard surfaces

Avoid spraying on hard surfaces like driveways & sidewalks that lead to gutters & drains to minimize pyrethroid runoff.

Always read & follow label directions.
